

modility **Fact Sheet**

Company modility GmbH

Category Logtech Startup

Founded July 2020

Based in Hamburg, Germany

Go live March 2021

About us Modility is a smart booking and brokerage platform for intermodal transport in Europe - currently focusing on road and rail. Operators can market their transport capacities via the portal and forwarders can easily find and book them. In this way, modility is to become the central access point to Combined Transport and facilitates the switch to more climate-friendly CT transportation.

Mission With modility, we want to simplify access to Combined Transport for all companies, enabling them to make better decisions when planning their transport. This is our impact to make transport logistics more sustainable and fit for the future.

Sustainability Combined Transport generates up to 80% less CO2 than conventional road transport. Through our brokerage service, we help our customers to shift freight from road to rail and thus contribute to the modal shift and the achievement of sustainability targets in the transport sector.

Shareholder Hamburger Hafen und Logistik AG (HHLA)

Funding The technical development of further innovations at modility is funded as of November 2022 by the German Federal Ministry for Digital and Transport (BMDV) in the context of their 'Future Rail Freight Transport' program.
